**Question 11.9.1.2:** Write the first five terms of the sequence whose terms are represented by  $x_n = \frac{n}{n+1}$

**Solution:** Given the terms of the sequence are  $x(n) = \frac{n}{n+1}$  where  $n = 0, 1, 2, 3, 4, \dots$

In terms of  $u(n)$ ,  $x_n$  is

$$x(n) = u(n) - \frac{u(n)}{n+1} \quad (1)$$

Z-transform is defined as,

$$x(n) \xleftrightarrow{Z} X(N)$$

$$P(Z) = \sum_{i=-\infty}^{\infty} P(n).Z^{-n} \quad (2)$$

Here, Z-transform

$$P(Z) = \sum_{i=1}^{\infty} x(n).Z^{-n} \quad (3)$$

$$= \sum_{i=1}^{\infty} \frac{n}{n+1}.Z^{-n} \quad (4)$$

On solving,

$$P(Z) = \frac{Z}{Z-1} + Z \log(1 - Z^{-1}) \quad (5)$$
