Question: 42 In the following block diagram, R(s) and D(s) are two inputs. The output Y(s) is expressed as $Y(s) = G_1(s)R(s) + G_2(s)D(s)$. $G_1(s)$ and $G_2(s)$ are given by

a)
$$G_1(s) = \frac{G(s)}{1 + G(s) + G(s)H(s)}$$
 and $G_2(s) = \frac{G(s)}{1 + G(s) + G(s)H(s)}$

b)
$$G_1(s) = \frac{G(s)}{1 + G(s) + H(s)}$$
 and $G_2(s) = \frac{G(s)}{1 + G(s) + H(s)}$

c)
$$G_1(s) = \frac{G(s)}{1 + G(s) + H(s)}$$
 and $G_2(s) = \frac{G(s)}{1 + G(s) + G(s)H(s)}$

d)
$$G_1(s) = \frac{G(s)}{1 + G(s) + G(s)H(s)}$$
 and $G_2(s) = \frac{G(s)}{1 + G(s) + H(s)}$

Solution:

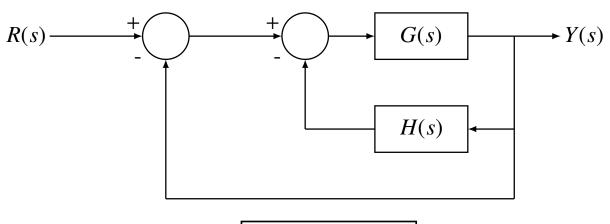

Let $Y(s) = Y_1(s) + Y_2(s)$, where $Y_1(s)$ = output considering only R(s), $Y_2(s)$ = Output considering only D(s)

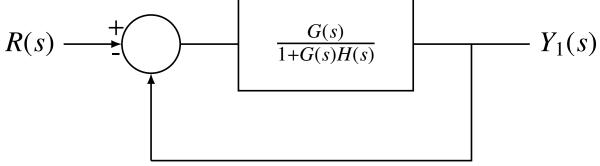

When only R(s) is present:

$$\frac{Y_1(s)}{R(s)} = \frac{\frac{G(s)}{1 + G(s)H(s)}}{1 + \frac{G(s)}{1 + G(s)H(s)}}$$
(1)

$$Y_{1}(s) = \left[\frac{G(s)}{1 + G(s) + G(s)H(s)}\right]R(s)$$

$$(2)$$

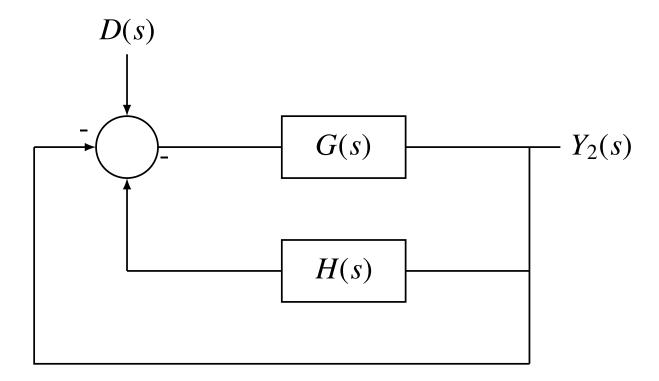

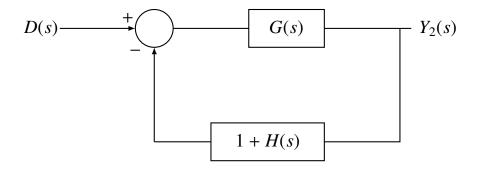

Hence,

$$G_1(s) = \frac{G(s)}{1 + G(s) + G(s)H(s)}$$
(3)

When only D(s) is present,

$$\frac{Y_2(s)}{D(s)} = \frac{G(s)}{1 + G(s)[1 + H(s)]} \tag{4}$$

$$\frac{Y_2(s)}{D(s)} = \frac{G(s)}{1 + G(s)[1 + H(s)]}$$

$$Y_2(s) = \left[\frac{G(s)}{1 + G(s)[1 + H(s)]} \right] D(s)$$
(5)

Hence,

$$G_2(s) = \frac{G(s)}{1 + G(s) + G(s)H(s)}$$
 (6)

Option (a) is correct
