Question 11.9.1.2: Write the first five terms of the sequence whose n^{th} terms $x(n) = \frac{n}{n+1}$

Solution: Given the terms of the sequence are $x(n) = \frac{n}{n+1}$ where $n = 0, 1, 2, 3, 4...$

In terms of $u(n)$, $x(n)$ is

$$x(n) = u(n) - \frac{u(n)}{n+1} \qquad (1)$$

$$x(n) = \begin{cases} 0 & \text{if } n = 0 \\ u(n) - \frac{u(n)}{n+1} & \text{if } n > 0 \\ \text{not defined} & \text{if } n < 0 \end{cases}$$

Z-transform is defined as,

$$x(n) \overset{Z}{\longleftrightarrow} X(Z)$$

$$X(Z) = \sum_{i=-\infty}^{\infty} x(n).Z^{-n} \qquad (2)$$

Here, Z-transform

$$X(Z) = \sum_{i=1}^{\infty} x(n).Z^{-n} \qquad (3)$$

$$= \sum_{i=1}^{\infty} \frac{n}{n+1}.Z^{-n} \qquad (4)$$

On solving,

$$X(Z) = \frac{1}{1 - Z^{-1}} + Z \log(1 - Z^{-1}) \qquad (5)$$
